

Positive review of 2019

To the end of the year, Enzymicals AG is positively looking back and is recognize a continuous organic growth with a significant increase in turnover.

The company continues to develop dynamically. In addition to the positive balance and the 30% increase in annual sales, the industrialization of a biocatalytic process and the start of construction of the center for life science and plasma technology are trend-setting for Enzymicals AG. The intensive activities in the scale-up of enzyme and chemical productions have resulted in new partnerships with external service providers and producers, which make it possible to manufacture our biotechnological products even faster on an industrial scale and offer them globally. Thanks to the experience gained in outsourcing production processes, the establishment of our own production capacity in the new center can now be promoted in a much more focused manner.
